

CLIM XS

Ultra-light, ultra-thin with high insulation performance

Thickness is not a prerequisite for good insulation performance. Highly insulating and ultra-thin, **CLIM XS** facade panel is composed of insulation that is five times more efficient than rockwool, for facades with high thermal performance. With a U Value of 0.3 for a thickness of only 24 mm, it offers the same thermal performance as 100 mm-thick mineral wool. An ideal product for renovations or on thin facades. Lighter and five times thinner than a standard infill element, **CLIM XS** facilitates on-site installation of the facade. This saves time and labour, ensuring efficient projects.

Applications

New building

Renovation

Buildings: tertiary, residential, education, hotels, leisure, offices, healthcare, retail and more.

Installation

CLIM XS can be added to traditional curtain wall, horizontal and vertical frameworks.

Benefits

- Highly insulating and ultra-thin
- Off-site manufacture for quick assembly
- Ultra-thin
