

Fa7

Our architectural facade panel

Fa7 is an infill element for lightweight shadow box facades.

To enable more depth, the glazing is a few centimetres spaced the aluminium cladding and brings your facade alive! Enliven the facade with bright colours (endless choice of colours) or blend the sheet metal in with the glazing – with **Fa7**, every effect is possible.

Fa7 is suitable for facades with glazing depths of 32 mm, 35 mm and more than 45 mm.

Applications

New building

Renovation

Buildings: tertiary, residential, education, hotels, leisure, offices, healthcare, retail and more.

Installation

Fa7 is a 4-sided system for traditional curtain wall systems and traditional joinery from a thickness of 32 mm.

Benefits

- Giving visual continuity between the different zones of the facade
- Aeration grid to reduce the risk of condensation and moderate the pressure fluctuations to maintain thermal performance whilst minimising the amount of dust entering
- Product under warranty and easy to install
